EXPERIENCE

Infobip — *Software engineer for iOS Conversation app*

August 2020 - May 2023

Contributed to all development processes of the Conversation app from the very beginning

- Implemented test-driven development (TDD) with unit tests, UI tests, and integration tests
- Managed app localization for both right-to-left and left-to-right languages
- Executed deep UI customization, including flexible navigation, color variations, deep linking, and branding
- Created an SDK for third-party application integration

Wirecard — *Software developer for boon & boon.PLANET*

June 2019 - August 2020

Joined Slovakian office of Munich-based FinTech company focused on providing digital banking solutions and cashless payments as a iOS engineer

- Implemented new features for Boon Family projects
- Updated and supported CI/CD scripts using Jenkins, Fastlane, Ruby, and Bash
- Addressed bug fixes
- Performed code refactoring
- Conducted UI and unit testing

Invitly — *Leading iOS developer*

April 2018 - May 2019

Was part of iOS development team for a community platform that connects professionals with the right contacts, thereby enabling them to reach their goals

- Built from the legacy code base new application that facilitates real-world meetings
- Refactored needed features and fixed bugs from legacy source code
- Added new features and implemented a fresh user interface design
- Increased performance of the final application

Curogram — *Leading iOS developer*

June 2017 - April 2018

Operated as the lead developer for iOS on communication platform

- Developed an instant messenger for healthcare providers and patients to share medical information
- Refactored source code and transitioned it to external frameworks
- Handled new feature implementation
